ADITYA KISHORE ROY

Software Intern

PROGRAMMING LANGUAGES

Python | SQL | C | Java | Java Script | React

FRAMEWORKS

Scikit-learn | PyTorch | LangChain

TOOLS

Github | Numpy | Pandas | Seaborn | Matplotlib | Jupyter Notebook

CONCEPTS

Database Management | Machine Learning | Deep Learning | Computer Networks | Operating Systems

SOFT SKILLS

Collaborate effectively with diverse teams. Communicate clearly to ensure alignment on projects. Solve problems creatively, learning from mistakes.

EDUCATION

Manipal Institute of Technology
BTECH in Computer & Communication Engineering

CONTACT

adityakroy123@gmail.com
+91-9885173701

PROFILE

Passionate about aerospace and data-driven systems, with hands-on experience in machine learning, data visualization, and full-stack development. Skilled in Python, Pandas, and Scikitlearn, with growing exposure to deep learning and generative AI. Keen interest in applying AI to aerospace challenges. A quick learner who thrives in solving real-world problems, eager to contribute to impactful engineering teams.

WORK EXPERIENCE

Mars Rover Manipal ***Manipal August 2023 - April 2024***

Conducted data-driven analysis on sensor-actuator systems, emphasizing predictive modeling for hardware-software integration.

Collaborated on system-level integration with sensors and actuators.

Zemoso Technologies ***Hyderabad May 2025 - July 2025***

Zemoso is a product studio offering agile pods to solve complex product design and product development challenges.

Experience at Zemoso:

Gained Hands-on experience with Python Libraries such as Numpy and Pandas for data manipulation and analysis.

Learned to visualize complex datasets using Matplotlib and Seaborn, building clear data visualization.

Applied ML workflows using Python libraries for real-world datasets, developing insights through visualization and feature extraction.

PROJECTS

Dynamic Course Allocator ***PostgresSQL(Neon), Express, React***

The Dynamic Course Allocator is a database-driven web application designed to streamline and automate the process of course allocation in academic institutions. It provides a structured platform for students to apply for courses and for administrators to manage applications, monitor allocations, and ensure optimal resource utilization.

Hospital Management System ***Java, Javafx***

The Hospital Management System is a desktop-based application developed using JavaFX that simplifies and digitizes the day-to-day operations of a hospital. The system provides a user-friendly graphical interface for hospital staff, doctors, and administrators to manage patient records, appointments, staff details, and billing information efficiently.

Flight Data Analysis & Visualization ***Python, Seaborn, Matplotlib***

Performed exploratory data analysis (EDA) on publicly available flight datasets (e.g., ADS-B, FAA, or Kaggle).Visualized time-series patterns in altitude, speed, and engine parameters to identify operational trends. Built interactive and static dashboards to summarize flight performance metrics for decision-making.

POR's

Core Committee Member REVELS - March 2025

Head of Videography Photography club Manipal - August 2025

General Secretary Photography club Manipal - August 2025
