ADITYA KISHORE ROY

Software Intern

PROGRAMMING LANGUAGES

Python | SQL | C | Java | Java Script | React

FRAMEWORKS

Scikit-learn | PyTorch | LangChain

TOOLS

Git | Numpy | Pandas | Seaborn | Matplotlib

CONCEPTS

Database Management | Machine Learning | Computer Networks | Operating Systems

SOFT SKILLS

Collaborate effectively with diverse teams. Communicate clearly to ensure alignment on projects. Solve problems creatively, learning from mistakes.

EDUCATION

Manipal Institute of Technology
BTECH in Computer & Communication Engineering

CONTACT

adityakroy123@gmail.com

PROFILE

Passionate about aerospace and data-driven systems, with hands-on experience in machine learning, data visualization, and full-stack development. Skilled in Python, Pandas, and Scikitlearn, with growing exposure to deep learning and generative AI. Keen interest in applying AI to aerospace challenges. A quick learner who thrives in solving real-world problems, eager to contribute to impactful engineering teams.

WORK EXPERIENCE

Mars Rover Manipal ***Manipal August 2023 - April 2024***

- Conducted data-driven analysis on sensor-actuator systems, emphasizing predictive modeling for hardware-software integration.
- Collaborated on system-level integration with sensors and actuators.

Zemoso Technologies ***Hyderabad May 2025 - July 2025***

- Zemoso is a product studio offering agile pods to solve complex product design and product development challenges.

Experience at Zemoso:

- Gained Hands-on experience with Python Libraries such as Numpy and Pandas for data manipulation and analysis.
- Learned to visualize complex datasets using Matplotlib and Seaborn, building clear data visualization.
- Applied ML workflows using Python libraries for real-world datasets, developing insights through visualization and feature extraction.

PROJECTS

Dynamic Course Allocator ***PostgresSQL(Neon), Express, React***

- Designed and developed a full-stack course allocation platform enabling students to apply for courses and administrators to manage approvals and allocations.
- Implemented role-based authentication and RESTful APIs for handling user registration, course management, and application workflows.

Stock Trading Platform ***Python, JavaScript***

- Developed a simulated stock trading system supporting order placement, portfolio tracking, and real-time price updates.
- Engineered core trading logic including buy/sell execution, balance management, and transaction history tracking.

Flight Data Analysis & Visualization ***Python, Seaborn, Matplotlib***

- Performed exploratory data analysis on large-scale flight datasets (Kaggle) to uncover patterns in altitude, speed, and operational parameters.
- Engineered time-series visualizations and statistical summaries to identify anomalies and performance trends across flights.

POR's

Head of Videography Photography club Manipal - August 2025

General Secretary Photography club Manipal - August 2025
